SUMMARY

AI Engineer who ships LLM products from prototype to real users: RAG, tool-using agents, evaluation, and privacy-first document pipelines on AWS (Claude on Bedrock, OpenAI). Lead AI Engineer on A-IEP, an open source platform that turns special-education plans into plain language for parents. Mentored 50+ student engineers. M.S. in AI, Northeastern. Seeking a founding or early AI engineering role.

EXPERIENCE

The Burnes Center for Social Change, Boston, MA

Jul 2024 – Present

AI Engineer

- Lead AI Engineer on **A-IEP** (a-iep.org, open source): took a prototype to production as a 7-stage Step Functions pipeline (Mistral OCR, Comprehend redaction, OpenAI, translation). About **375 IEPs** processed from about 260 family accounts (Jul 2026).
- Designed A-IEP's privacy pipeline: every name is redacted before the summarizing and translating models see any text (shipping Oct 2026), redaction fails closed, any failure purges unredacted artifacts, and the original upload is deleted; infrastructure tests guard the protected stores.
- Wrote A-IEP's evaluation design (atomic-fact checks, cross-family judge, per-language translation judge; \$0.25 to \$0.55/doc). Benchmarked OCR on synthetic IEPs: a self-hostable 1B model matched Mistral OCR on facts and checkboxes; a 4-bit build read 0% of checkboxes.
- Lead engineer on **ABE** since Feb 2026, the NASPO award-winning Claude-on-Bedrock procurement agent for Massachusetts OSD (Bedrock Knowledge Base on OpenSearch Serverless): built quality monitoring on a 7-metric RAGAS pipeline and a thumbs-up-to-test-case path. Set direction for **One-L** from Nov 2025, an 11-stage Step Functions contract-redlining workflow built with four co-op students.
- Technical direction for **knowledge-agent-for-impact**, the reusable RAG stack (CDK, Amazon Kendra, Lambda, Cognito) behind AI for Impact agency chatbots. Helped lead the program's technical side (26 tools built).
- Set technical direction for **Public Voice** (live at InnovateUS), a no-login voice survey (Next.js, FastAPI, OpenAI) that asks one follow-up when an answer is vague; no audio stored. Sole engineer on **Civic AI Course Delivery**, an SMS-paced 8-day course platform (Hono on Lambda, DynamoDB, EventBridge), built in 3 days; pre-launch.

The Burnes Center for Social Change, Boston, MA

Jan 2024 – Jun 2024

GenAI Product Development Co-op

- Co-built **GENIE**, the Generative AI Sandbox for Massachusetts state employees (with EOTSS and AWS): multi-model chat and RAG; access for **44,000+ state employees** per the Burnes Center. Presented to Governor Healey with the co-op cohort.
- Wrote **Smart Model**, an LLM router: one Claude call on Bedrock reads each prompt against a model capability sheet and picks among 17 Bedrock models by task, cost, and token size, sending simple requests to models up to **12× cheaper** per request than the default.

Acharya Institutes, Bangalore, India

Sep 2021 – Aug 2023

Software Engineer (Flutter)

- Built and owned the cross-platform ERP app (attendance, marks, Razorpay payments) used by every student and staff member; monthly active users grew **2,972 to 16,148** (Android) while I owned it; raised the store rating from 1.2 to 4.5; trained the interns who took it over.

SKILLS

LLM/ML: Claude via AWS Bedrock, OpenAI, RAG, tool-use agents, MCP, RAGAS, LLM-as-judge, LangChain, prompt engineering
Cloud: AWS (CDK, Step Functions, Lambda, API Gateway, Cognito, DynamoDB, S3, KMS, Comprehend, Kendra, OpenSearch Serverless, CloudWatch), GitHub Actions, Docker
Lang/Data: Python, TypeScript, JavaScript, Dart, Java, C++, SQL, PostgreSQL, Weaviate, React, Next.js, FastAPI, Flutter, Claude Code

EDUCATION

Northeastern University, Boston, MA, M.S. in Artificial Intelligence (GPA: 3.83)

Dec 2024

Acharya Institute of Technology, Bangalore, India, B.E. in Computer Science

Jul 2022

PROJECTS & AWARDS

- **arc-control-mcp** (open source, npm, 2026): sole author of an MCP server with **26 tools** that lets agents drive the Arc browser; 16 test files, CI, a published threat model. An agent-driven review found failed page scripts reported as success; fixed in v0.3.0.
- **VCT Scout** (AWS x Riot Games hackathon, Dec 2024): **2nd of 3,200+ participants** and Best Cross-Regional Team Submission, team of four. Designed the agent's tool calling (Claude on Bedrock); wrote its orchestrating system prompt and team-composition tools.
- **Awards:** Governor's Citation, Commonwealth of Massachusetts (Jun 2024). **Press:** Amazon, Boston Business Journal, Northeastern News, GovTech.
